Peak Minerals - Azomite, Inc.
P O Box 6588
Branson, MO 65615

Gentlemen:

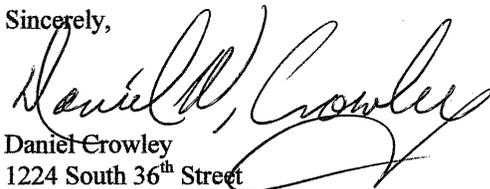

I am a Master Gardener in Jefferson County, Texas. We live inland from the Gulf of Mexico and have a nice breeze most of the time, accompanied with plenty of moisture. A relative of mine, George Harvey of Bridge City, Texas, told me about the minerals he had ordered from you and how much better his garden was after using your product. I tried it and this is my third time to order. I like the granulated best because it is easier to handle and apply - no blowing of dust.

My garden is beautiful from using Azomite - the color of the beet leaves, cabbage, lettuce and eggplants are much darker than they were before. The production and quality of the tomatoes are superior. I have tried these minerals on all my trees (oranges, pecans, figs and persimmons) and am experiencing bumper crops. Even though we survived Hurricane Rita with gusts to 130 mph, my small orange trees produced a bushel of oranges this season.

My 90 year old neighbor, who is an avid gardener, keeps asking my wife what secret I have to have such a great garden. I am very happy that someone shared the knowledge of your product with me and if you will send some brochures to me, I will pass them on to other Master Gardeners in Jefferson and Orange Counties. We have established a Farmers Market in the Spring and early Summer and have more customers than we can handle. If they could get introduced to this product, it would increase their production.

I recently read an article on the computer from Baylor University Alzheimer's Research Center in Houston that studies are indicating diet has a great affect on this disease and they are recommending you select the fruit and vegetables with the darker, more vivid colors like dark purple eggplant and dark lettuce for salads. For this reason alone, I am putting A to Z on all the food we are growing.

Sincerely,

Daniel Crowley
