

Test Subject (B) takes root with AZOMITE®

Dear Mr. Emerson,

In early February I trimmed back a philodendron plant. I placed 1 clipping in plain tap water "Test A". I placed 1 clipping in 1 teaspoon of AZOMITE® with tap water "Test B". I placed 1 clipping with 1 teaspoon of root enhancer and tap water "Test C".

All 3 clippings were put in their individual glass and set for approximately 2 months.

As you can see by the photos "Test B" (the AZOMITE® test) root results were significant with an approximate 3" growth. "Test A" and "Test C" had NO root growth.

Sincerely,

Lurisa M. Adame
